

Some of my favorite activities are playing soccer, dancing, painting, singing, and coding.

I want to go into depth about each of these activities, so let me tell you about them.

I play as a center midfielder in soccer, and this position requires a lot of running, stamina, and endurance. The center mid-fielder is the center of the operation for passing and making connections down the field. I act as a defender and an attacker. I help move the ball up from defense to offense and assist in getting goals.

I love to line-dancing or salsa or just dance my heart out whenever I feel. I've been told I have a good rhythm, and I can move my hips well. Dancing makes me happy. If I ever feel down, I dance. I put on my favorite songs and listen to them. It's really nice to listen to music while showering as well. You can have a dance party just about anywhere.

I have painted many artworks, but my favorite thing to paint is the beach or the sunset. I find these two landscapes to be some of the most beautiful sites to see. Sunsets are filled with colors; such as reds, oranges, yellows, pinks, and more. I have painted some sunsets with purples in them. Beaches are my favorite place to be. It makes me feel calm. I like to paint the deep blue waters and add white for ripples and waves.

I sing mostly when I'm in the car or when I'm in the shower. I am not the best singer; I believe that I am a better dancer than I am a singer. But I will try my best. And if I have fun while doing it, then who cares. I like to sing 'Killing Me Softly'. Other songs I like include genres such as yacht rock and pop. I love a good 80s song.

Coding has become my absolute passion. I started coding in 2024 where I took a coding bootcamp online with Vanderbilt. I learned a lot in that course, such as using GitHub. In 2025, I built an internal AI for our company. I had some help with AI, but I will say, I coded most of it myself and looked through every code snippet AI would hand me. I was able to create a custom RAG pipeline and authentication. Now, at my job, I mostly work on automations. So, I have become a bit rusty with coding. I miss coding.
